Surrey Concurrency Workshop and S-REPLS 12

July 24, 2019

Our Focus

We would like to verify graph-manipulating programs written in real C with end-to-end machine-checked correctness proofs.

- Graph algorithms are hard to reason about but occur in critical areas of real systems
- Real C code has achingly subtle semantics in some places
- Machine-checked proofs are merciless and lengthy: we want to reuse existing codebases

Our Strategy

We will use the CompCert certified compiler's definition of C and the Verified Software Toolchain's (VST) version of Separation Logic to certify our code against strong specifications expressed with mathematical graphs.

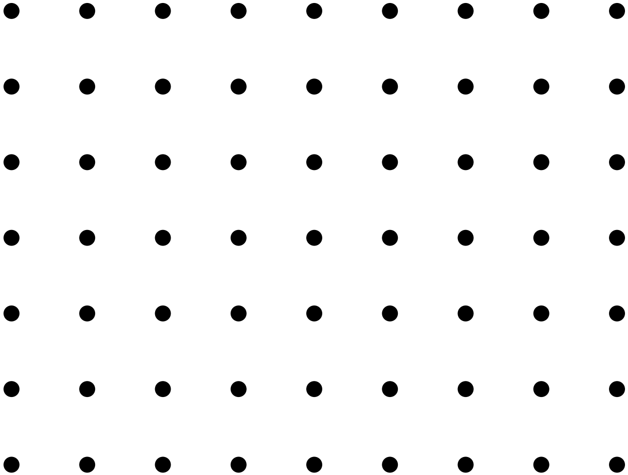
- Between them, CompCert and VST have 50+ person-years worth of development effort. It is highly desirous to fit within their frameworks rather than reinventing the wheel.
- We make no changes to CompCert. We make minimal (approximately 1% of codebase) additions to VST (two new tacticals, assorted lemmas).
- Our techniques use vanilla separation logic (albeit with $-\!\!*$ and quantifiers).
- We have developed an expressive machine-checked framework for mathematical graphs that is powerful enough to verify real code.

Our Results

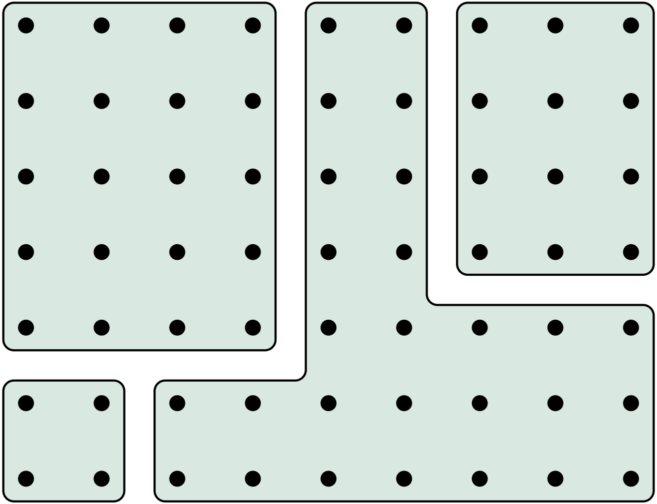
We have verified half a dozen graph algorithms, including:

- Graph visiting/coloring; ditto for DAG
- Graph reclamation (*i.e.* spanning tree followed by tree reclamation)
- Union-find (both for heap- and array-represented nodes)
- Garbage collector for CertiCoq project
  - Generational OCaml-style GC for a purely functional language
  - $\approx$400 lines of (rather devilish) C
  - We pinpoint two places where C is too weak to define an OCaml-style GC
  - Verify (almost) full graph isomorphism
  - $\approx$14,000 lines of example-specific proof script

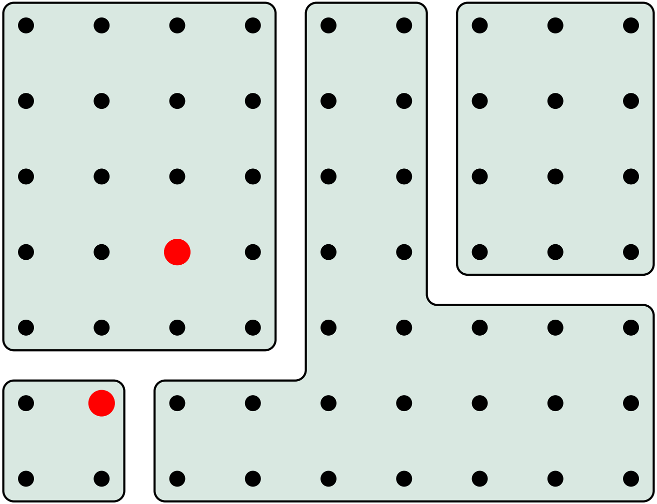
Union-Find Algorithm



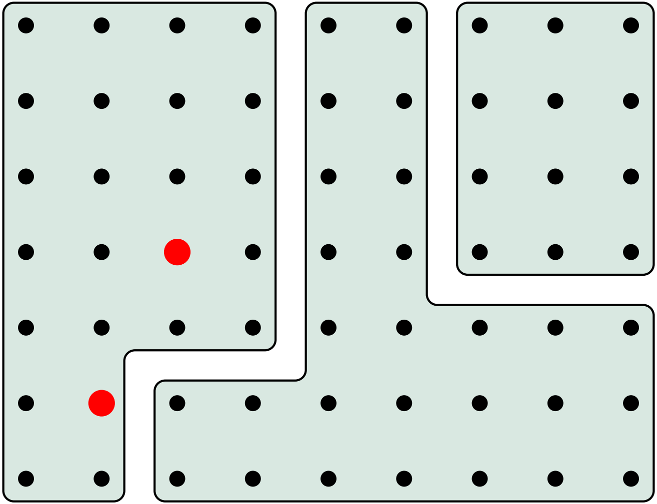
Union-Find Algorithm



Union-Find Algorithm



Union-Find Algorithm

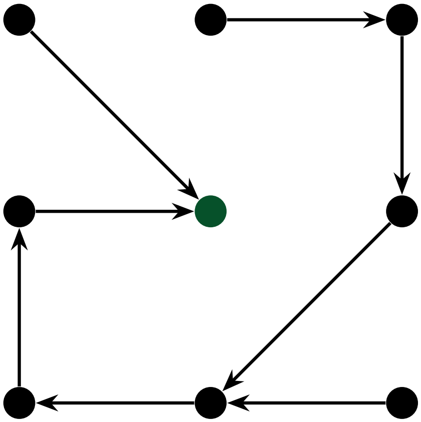


Union-Find Algorithm: Disjoint-Set Data Structure

```
struct Node {
    unsigned int rank;
    struct Node *parent;
};
```

Union-Find Algorithm: Disjoint-Set Data Structure

```
struct Node {
    unsigned int rank;
    struct Node *parent;
};
```



Union-Find Algorithm: Find

```
struct Node {
    unsigned int rank;
    struct Node *parent;
};
struct Node* find(struct Node* x) {
    struct Node *p, *p0;
    p = x -> parent;
    if (p != x) {
        p0 = find(p);
        p = p0;
        x -> parent = p;
    }
    return p;
};
```

Ramify Rule

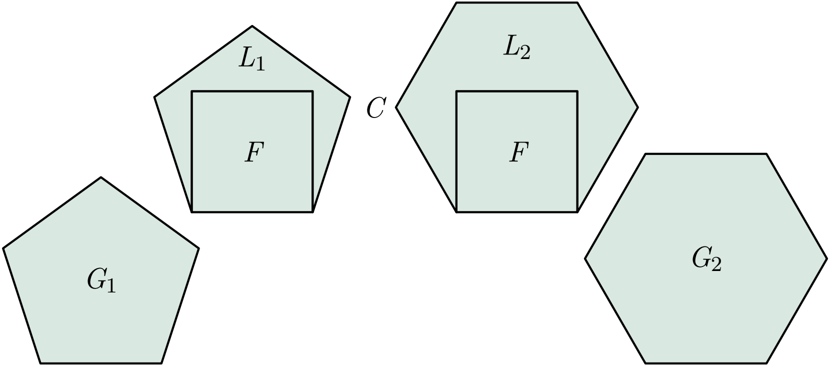
$$\frac{\{L_1\}\ C\ \{L_2\}}{\{G_1\}\ C\ \{G_2\}}$$

(Hobor and Villard)

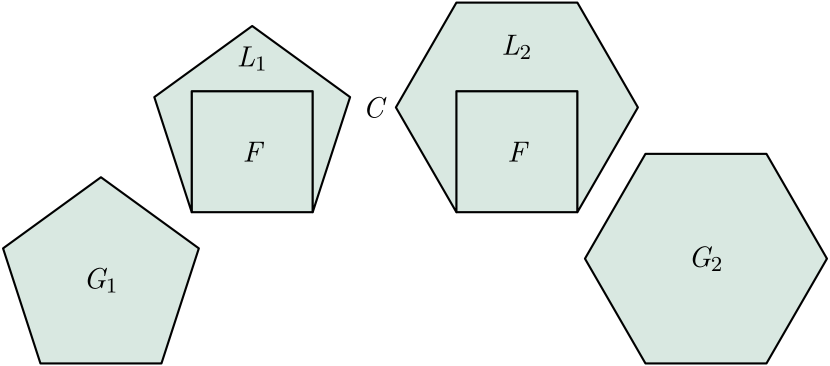
Ramify Rule



$$\frac{\{L_1\}\ C\ \{L_2\}}{\{G_1\}\ C\ \{G_2\}}$$

(Hobor and Villard)

Ramify Rule

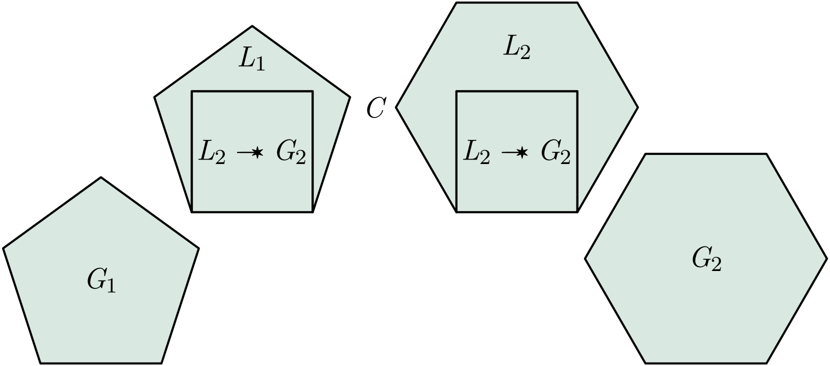


$$\frac{\{L_1\}\ C\ \{L_2\}}{\{G_1\}\ C\ \{G_2\}}$$

Hint: $\forall P, Q\,.\ P \star (P \mathrel{-\!\!\star} Q) \vdash Q$

(Hobor and Villard)

Ramify Rule

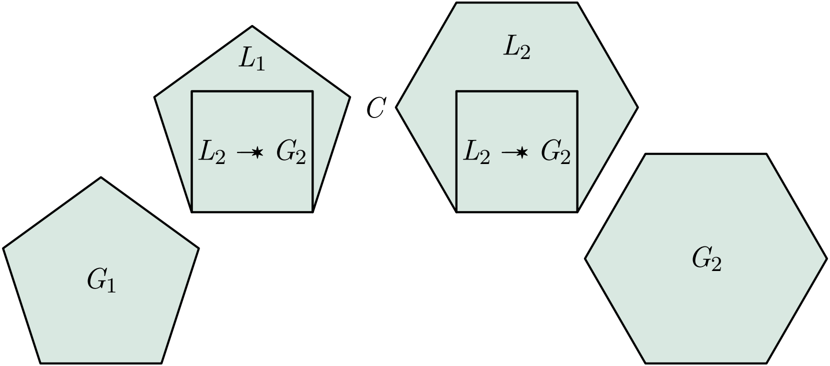


$$\frac{\{L_1\}\ C\ \{L_2\}}{\{G_1\}\ C\ \{G_2\}}$$

Hint: $\forall P, Q\,.\, P \star (P \mathrel{-\!\!\star} Q) \vdash Q$

(Hobor and Villard)

Ramify Rule



$$\frac{\{L_1\}\ C\ \{L_2\} \qquad G_1 \vdash L_1 \star (L_2 \mathrel{-\!\!\star} G_2)}{\{G_1\}\ C\ \{G_2\}}\ (\mathtt{mod}(C) \cap \mathtt{fv}(L_2 \mathrel{-\!\!\star} G_2) = \emptyset)$$

(Hobor and Villard)

Localize Rule

$$\frac{\{L_1\}\ C\ \{\quad L_2\} \qquad G_1 \vdash L_1 \star R \qquad R \vdash \qquad L_2 \mathrel{-\!\!\star} G_2}{\{G_1\}\ C\ \{\quad G_2\}}$$

Localize Rule

$$\frac{\{L_1\}\ C\ \{\exists x.\ L_2\} \qquad G_1 \vdash L_1 \star R \qquad R \vdash \forall x.\ (L_2 \mathrel{-\!\!\star} G_2)}{\{G_1\}\ C\ \{\exists x.\ G_2\}}$$

Localize Rule

$$\frac{\{L_1\}\ C\ \{\exists x.\ L_2\} \qquad G_1 \vdash L_1 \star R \qquad R \vdash \forall x.\ (L_2 \mathrel{-\!\!\star} G_2)}{\{G_1\}\ C\ \{\exists x.\ G_2\}}\ (\dagger)$$

$$(\dagger)\ \ \mathtt{mod}(C) \cap \mathtt{fv}(R) = \varnothing$$

Localize Rule

$$\frac{\{L_1\}\ C\ \{\exists x.\ L_2\} \qquad G_1 \vdash L_1 \star R \qquad R \vdash \forall x.\ (L_2 \mathrel{-\!\!\star} G_2)}{\{G_1\}\ C\ \{\exists x.\ G_2\}}\ (\dagger)$$

$$(\dagger)\ \ \texttt{mod}(C) \cap \texttt{fv}(R) = \varnothing$$

Comparing to Ramify rule:

$$\frac{\{L_1\}\ C\ \{L_2\} \qquad G_1 \vdash L_1 \star (L_2 \mathrel{-\!\!\star} G_2)}{\{G_1\}\ C\ \{G_2\}}\ (\ddagger)$$

$$(\ddagger)\ \ \texttt{mod}(C) \cap \texttt{fv}(L_2 \mathrel{-\!\!\star} G_2) = \varnothing$$

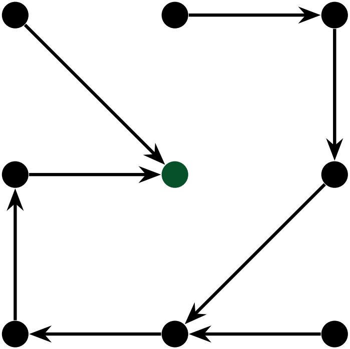
Union-Find Algorithm: Find

```
struct Node {
    unsigned int rank;
    struct Node *parent;
};
struct Node* find(struct Node* x) {
    struct Node *p, *p0;
    p = x -> parent;
    if (p != x) {
        p0 = find(p);
        p = p0;
        x -> parent = p;
    }
    return p;
};
```



The Specification of Find

PRE: $\texttt{graph\_rep}(\gamma) \wedge \texttt{vvalid}(\gamma, x)$

POST: $\exists \gamma', t \text{ s.t. } \texttt{graph\_rep}(\gamma') \wedge \texttt{uf\_eq}(\gamma, \gamma') \wedge \texttt{root}(\gamma', x, t)$

The Specification of Find

PRE: $\texttt{graph\_rep}(\gamma) \land \texttt{vvalid}(\gamma, x)$

POST: $\exists \gamma', t \text{ s.t. } \texttt{graph\_rep}(\gamma') \land \texttt{uf\_eq}(\gamma, \gamma') \land \texttt{root}(\gamma', x, t)$

$$\texttt{graph\_rep}(\gamma) \stackrel{\text{def}}{=} \mathop{\bigstar}_{\texttt{vvalid}(\gamma, v)} \texttt{v\_rep}(\gamma, v)$$

$$\texttt{root}(\gamma, x, t) \stackrel{\text{def}}{=} \gamma \models x \rightsquigarrow t \land \forall y.\ \gamma \models t \rightsquigarrow y \Rightarrow y = t$$

$$\begin{aligned}\texttt{uf\_eq}(\gamma_1, \gamma_2) \stackrel{\text{def}}{=} & \big(\forall x.\ \texttt{vvalid}(\gamma_1, x) \Leftrightarrow \texttt{vvalid}(\gamma_2, x)\big) \ \land \\ & \forall x, r_1, r_2.\ \texttt{root}(\gamma_1, x, r_1) \Rightarrow \\ & \texttt{root}(\gamma_2, x, r_2) \Rightarrow r_1 = r_2\end{aligned}$$

Proof Skeleton of Find

$$\{\texttt{graph\_rep}(\gamma) \wedge \texttt{vvalid}(\gamma, \texttt{x})\}$$

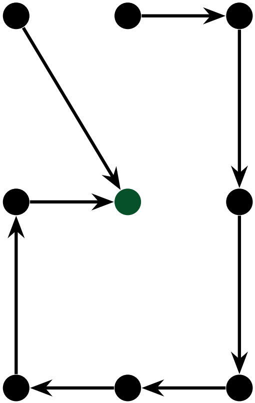
Modularity: The Array Version of Find

```
struct subset {
    int parent;
    unsigned int rank;
};
int find(struct subset subs[], int i) {
    int p0 = 0;
    int p = subs[i].parent;
    if (p != i) {
        p0 = find(subs, p);
        p = p0;
        subs[i].parent = p;
    }
    return p;
}
```



The same specification but a different representation

PRE: $\texttt{graph\_rep}(\gamma, s) \wedge \texttt{vvalid}(\gamma, x)$

POST: $\exists \gamma', t \text{ s.t. } \texttt{graph\_rep}(\gamma', s) \wedge \texttt{uf\_eq}(\gamma, \gamma') \wedge \texttt{root}(\gamma', x, t)$

The same specification but a different representation

- A Generational Garbage Collector

A Generational Garbage Collector

- 12 generations; mutator allocates only into the first
- Functional mutator, so no backward pointers

A Generational Garbage Collector

- 12 generations; mutator allocates only into the first
- Functional mutator, so no backward pointers
- Cheney's mark-and-copy collects generation to its successor
- Receiving generation may exceed fullness bound, triggering cascade of further pairwise collections

A Generational Garbage Collector

- 12 generations; mutator allocates only into the first
- Functional mutator, so no backward pointers
- Cheney's mark-and-copy collects generation to its successor
- Receiving generation may exceed fullness bound, triggering cascade of further pairwise collections
- Most tasks are handled by two key functions: `forward` (to copy individual objects) and `do_scan` (to repair the copied objects)

Overview of `forward` and `do_scan`

Bugs in the source C code

- Cheney was executed too conservatively, only part of `to` needs to be scaned.

Bugs in the source C code

- Cheney was executed too conservatively,
  only part of `to` needs to be scaned.
- Overflow in the following calculation:

```
int space_size =
        h->spaces[i].limit - h->spaces[i].start;
```

Undefined behavior in C

- Double-bounded pointer comparisons:

```
int Is_from(value * from_start,
            value * from_limit, value * v) {
    return (from_start <= v && v < from_limit); }
```

  Resolved using CompCert's "extcall_properties".

Undefined behavior in C

- Double-bounded pointer comparisons:

```
int Is_from(value * from_start,
            value * from_limit, value * v) {
    return (from_start <= v && v < from_limit); }
```

  Resolved using CompCert's "extcall_properties".
- A classic OCaml trick:

```
int test_int_or_ptr (value x) {
    return (int)(((intnat)x)&1); }
```

  Discussing `char` alignment issues with CompCert.
